DETAILED ACTION

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 6-13, 15 and 16 are rejected under 35 U.S.C. 102(e) as being anticipated by Gotoh et al. (U.S. 7,065,471).

As per claims 6 and 12, Gotoh et al. teach an acquisition unit remote from at least one of the stationary power stations for collecting measurement data detected by sensors in the power stations (see col. 5, line 58 to col. 6, line 11 and col. 8, lines 6-19); a diagnostics unit connected to the acquisition unit for classification of operating states of the power stations that are represented by the measurement data (see Fig. 1 and col. 7, line 51 to col. 8, line 19) a memory unit connected to the acquisition unit and the local diagnostics unit and the measurement data is centrally stored in the memory unit (see col. 7, lines 28-37); and a server unit connected to the memory unit that generates machine-readable data based on an HTML language (see col. 7, lines 1-27).

As per claims 7-10, 13, 15 and 16, Gotoh et al. further teach that portions of the machine-readable data are generated while a connection is established to the server

unit of the diagnostics system by at least one client computer via a communications link by an Internet browser installed on the client computer and the parts of the machine-readable data are requested by the client computer (see col. 7, lines 1-37).
